**Footnotes for Table 1.**

1. NS, not specified; AUC, area under the curve. Serving sizes in grams unless otherwise specified.
2. Mean ± SEM. Two GI values are shown for each food – one in which glucose sugar was used as the reference food and one in which white bread was used as the reference food.
3. Estimated by multiplying the food's listed GI value with glucose as the reference food by the listed g carbohydrate per serving and dividing by 100.

6. International Diabetes Institute (Melbourne, Australia), unpublished observations, 2006 – 2007.
7. Portions of the test food and the reference food contained 10 g carbohydrate.
8. Portions of the test food and the reference food contained 25 g carbohydrate.
9. GI calculated from the 120 min AUC data included in the original article using the AUC food/AUC reference food formula.
10. V Lang (Danone Vitapole Company, Le Plessis-Robinson, France), unpublished observations, 1996-2000.
11. GI calculated from the 180 min AUC data included in the original article using the AUC food/AUC reference food formula.
12. GI calculated by using a mathematical formula based on results from an in vitro starch hydrolysis assay.

13. White rice was used as the reference food, but glucose was also tested and had a GI of 122. The observed GI was multiplied by 100 and then divided by 122 to convert it to a GI on the glucose scale (ie, glucose = reference food with a GI of 100).
14. Portions of the test food and the reference food contained 75 g carbohydrate.
15. Portions of the test food and the reference food contained 100 g carbohydrate.

25. Portions of the test food and the reference food contained 20 g carbohydrate.
26. Potato used as the reference food with a GI fixed at 80. The GI of the test food was calculated by expressing the test food's glucose AUC value as a percentage of the potato's AUC value.
27. GI calculated from the 90 min AUC data included in the original article using the AUC food/AUC reference food formula.
28. GI calculated from the 150 min AUC data included in the original article using the AUC food/AUC reference food formula.
29. GI included in original article determined from AUC measured 120 min for only 4 time points (0, 30, 60 and 120 min).
30. GI included in original article determined from AUC measured 240 min for only 6 time points (0, 30, 60, 120, 180 and 240 min).
31. Portions of the test food and the reference food contained 45 g carbohydrate.
32. Ordinary corn flour arepa was used as the reference food.
